Regular Article**Efficiency impacts of Government policy on agricultural production in the presence of externalities**

Shujie Yao

Department of Economics, University of Portsmouth, Southsea, Hants, PO4 8JF, UK

Received 15 August 1998; accepted 14 November 1998. ; Available online 9 April 2002.

Abstract

Government intervention can create or enhance private incentives for farmers to produce certain crops at the expense of others. It may also induce allocative inefficiency. However, when externalities exist, or when market failures prevent the production system from achieving its best allocative efficiency, Government intervention may not be as undesirable as it is usually thought. This paper develops a modified policy analysis matrix, PAM, and uses the Thai agricultural diversification programme to demonstrate that Government policy to encourage more production of legume crops at the expense of rice is not as undesirable as it is criticized by some economists when water charging and environmental cost are considered.

Author Keywords: Thai agriculture, policy analysis matrix, efficiency, externality.

Contract farming. Report of the Committee of inquiry on contract farming.

Barker, Sir, J.
UK; Ministry of Agriculture, Fisheries and Food
COMMAND PAPER
(5099): 152pp.
Publication Year: 1972
2 tab., 55 app.
Publisher: -- London, HMSO., UK
Price: pounds-sterling 1.00
Language: English
Document Type: Miscellaneous

The Committee of Inquiry on Contract Farming was appointed in June 1971 to "assemble and consider the information about the various arrangements for the production of crops, livestock and other farm produce under commercial contract; also to advise on the extent and type of likely future developments in this field and on the scope for such developments in the national interest". Part I of the resulting report describes contract farming in its current manifestations, and considers the way in which it would be likely to develop; Part II analyzes the public interest question and discusses the pro's and con's of contracting; Part III contains conclusions, in particular findings on the possibilities for influencing future progress. The three principal findings are: that there is scope for more contract farming; that encouragement is required for more horizontal grouping of producers; and that there is urgent need for a coordinating body spanning agricultural production and marketing particularly to match in with EEC conditions. Such a body, perhaps named the UK Agriculture and Food Development Authority, would provide management and development advice, market intelligence and finance, eventually on a self-supporting basis. It would help to form farming and producer marketing groups which would be eligible for aid from EEC farm funds. The groups would help **farmers** to **match** their selling to the increasing size of food manufacturing buying interests.

FARMERS ALL OVER THE WORLD ARE TAKING THEIR HANDS OUT OF the dirt and planting them...

...reap the bounty of B2B e-commerce. * Maybe the image of a down-to-earth **farmer** who is also sophisticated in the ways of the high-tech world sounds silly to you, but it shouldn't. **Farmers** have a long history of being the earliest adopters of technology. They've had to...

...the isolation and stay connected with the rest of the world. For that very reason, **farmers** were among the first to jump on radio. They also began using GPS systems long before urban America caught onto it.

There are 350,000 large **farmers** in the United States--a demographic defined as the **farmers** who consume 95 percent of inputs and produce 95 percent of outputs. What's surprising is that 80 percent of these are connected to the **Internet**, a rate of participation that "far exceeds us urbanites," says Fulton Breen, CEO of XS...

...other derivatives, were devised by the agriculture industry and not the bankers.

Thus, these big **farmers** already understand highly complicated

Search Report from Ginger R. DeMille

business tools such as **auctions** , futures, and options for **crops** . "This is very complex stuff that requires you to be connected daily with the...

...which is seasonal, highly fragmented, and operates on very low margins--is precisely what draws **farmers** to the Net in droves. They see it as a practical tool that can help...

...at the numbers to see just how frighteningly slim the margins really are. U.S. **farmers** spend a total of \$185 billion annually on such inputs as chemicals, seeds, tractors, veterinary...

...guys are crazy," says Breen.

Clearly, even the smallest bit of savings helps. "If a **farmer** can find a way to save 5 percent on a fertilizer or do something more... going bankrupt or not," notes Anne Holland, publisher of MarketingSherpa.com, an online publisher of **Internet** marketing newsletters. "And, of course, we've all heard about the **farm** bankruptcies over the years and how tough it is."

Lucky for farmers, the investment they...

...the grain elevator and tell him to sell the grain," says Forrester's Sanders. "The **Internet** offers an opportunity for them to do many of those transactions online."

Forrester forecasts the...

Agriculture Web Sites Serve Farmers' Need for Efficient Auctions, Orders
Darnell Little
KRTBN KNIGHT-RIDDER TRIBUNE BUSINESS NEWS (CHICAGO TRIBUNE - ILLINOIS)
December 21, 1999
JOURNAL CODE: KCTR LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 1059

(USE FORMAT 7 OR 9 FOR FULLTEXT)

I think using the **Internet** could be both easier and cheaper (than live **auctions**)," Alberts said. "Time is money. You spend time driving to a sale two or three...

...do it in 15 minutes from your house -- that's big savings."

Most of the **Internet**-aware public might be familiar with consumer-oriented **auction Web sites** like eBay or uBid. But a growing number of online business-to-business **auction** companies are cropping up, many catering to the \$250 billion U.S. farming industry.

The...

...paper supplies has an e-commerce representative selling goods online. The total business-to-business **Internet** market is projected to reach \$1.3 trillion by 2003, according to Forrester Research, a Cambridge, Mass.-based **Internet** analyst firm.

While the American **farm** industry economy has been depressed for many years, **farmers** still spend billions annually on seeds, animal feed and **crop** protection chemicals -- all of which now can be bought and sold on the **Web**.

"Doing farming and ranching business over the **Internet** is pretty new, and we'll just have to see how well it's going to work," Alberts said. "But it's not that different from going to live **auctions**, and it's just a lot easier to find what you want on the computer."

North Carolina-based **Farms**.com is just one of several young e-commerce marketplaces for the agriculture industry on the **Web**. Major competitors include Cattle Info Net, an animal **auction** and catalog site run by Florida-based technology firm eMerge Interactive, and XSAg.com, a...

...e-commerce sites serving various areas of the farming market are: MachineFinder.com, a used **farm** equipment site run by John Deere & Co.; NetSeeds.com, a shopping hub for corn, soybeans...

...online entrepreneurs are just beginning to realize the financial opportunities in the farming market, where **Internet** shopping hubs can offer major advantages over many inefficient industry processes, said John Walter, editor of @griculture Online, a **Web**-based trade magazine for **farmers**.

"Auctions are part of the culture of farming and would seem a natural application to adapt to the **Web**," Walter said. "There've been quite a number of **Web** applications geared toward agriculture appearing recently. Some are moving into areas beyond livestock into areas...

...online market will only grow as more farmers buy computers and get connected to the **Web**, Walter believes. Some government statistics already show that farmers, like members of many other traditional, blue-collar industries, are increasingly becoming more computer- and **Internet**-literate.

The number of American farms with **Internet** access has more than doubled in the past two years, according to a report by...

Search Report from Ginger R. DeMille

... 52 percent of U.S. farms with sales exceeding \$250,000 were reported to have **Internet** access.

"There are a lot of ways that Web companies can make getting products easier..."

...Abstract: to help decision makers arrive at a rational policy for encouraging biofuel production. In the **model**, the government is the leader and would like to minimize the annual tax credits it allows the petro-chemical industry for producing biofuels. The **crops grown** for this purpose are on **land** now set aside and subsidized through a different support program. The agricultural sector is the follower. Its objective is to maximize profits by **selecting** the best mix of **crops** to **grow** as well as the percentage of **land** to set aside. Two solution algorithms are developed. The first involves a grid search over...

Language: English

...Abstract: litter utilization in an agricultural watershed using a Geographical Information System (GIS) and an optimization **model**. An optimization **model** is developed which **selects** broiler litter management practices that maximize total net returns to **land** and management and estimates economic value of litter as a fertilizer substitute for an agricultural watershed experiencing rapid **growth** in broiler production. **Land** application rates are determined based on **crop** nutrient requirements, fertilizer source, and litter cleanout schedule. Results indicate that litter as a fertilizer is economically favored over commercial fertilizer. **Land** area required for current litter application does not exceed suitable **land** application areas after excluding sensitive areas such as streams, roads and sink holes. However, litter from further **growth** in broiler production will soon reach the maximum capacity of suitable land areas in the...

Abstract: A methodology is outlined for relating the **selection** of irrigation system **design** parameters to the **crop** production profitability. Irrigation system uniformity along with the scheduling of applied water has an important effect on **crop** yield and thus net **farm** income. A computerized technique is used which relates system uniformity and scheduling practices to **crop growth** and production. For a given irrigation system **design**, furrow, sprinkle, or trickle, and a particular scheduling scheme, the seasonal water application which will maximize the net profit from a specified crop can be estimated. The computerized mathematical **model** requires data relating system costs and design parameters to water application uniformity, crop-water production...

Abstract: **Selection** of the best **land** for pyrethrum cultivation and determination of the production limiting factors are done through a qualitative process of **matching** **land** characteristics with the **crop** requirements using a **model** PYCULT built in the Automated **Land** Evaluation System (ALES). Climatic, soil and landform requirements for pyrethrum cultivation are provided. Climatic and **land** suitability maps are presented. About 42% of the land under study was found to be suitable for **growing** pyrethrum. Five percent of the area is highly suitable, the rest has limitations of some...

KEYED)

Abstract: A quantitative estimate of the production potential of major **crops** enables a better comparison of the productivity of different kinds of **land** and to make a **selection** of suitable alternative uses. This potential can be estimated by the FAO-AEZ **crop growth** simulation **model** (FAO, 1978: Report on the agro-ecological zones project. vol. 1, Methodology and Results for Africa. World Soils Resources Report No. 48, FAO, Rome). Although **model** outputs can not fully reproduce the actual situation, their application provides opportunities to formulate quantitative yield estimates and to identify **growth** constraints. The simulated potential dry matter yields of tef in the study area are high...

Title: BROILER LITTER APPLICATION TO LAND IN AN AGRICULTURAL WATERSHED - A GIS APPROACH

Author(s): XU F; PRATO T; FULCHER C

Corporate Source: UNIV MISSOURI,CTR AGR RESOURCE & ENVIRONM SYST,DEPT AGR
ECON/COLUMBIA//MO/65211

Journal: WATER SCIENCE AND TECHNOLOGY, 1993, V28, N3-5, P111-118

ISSN: 0273-1223

Language: ENGLISH Document Type: ARTICLE (Abstract Available)

...Abstract: litter utilization in an agricultural watershed using a Geographical Information System (GIS) and an optimization **model**. An optimization **model** is developed which **selects** broiler litter management practices that maximize total net returns to **land** and management and estimates economic value of litter as a fertilizer substitute for an agricultural watershed experiencing rapid **growth** in broiler production. **Land** application rates are determined based on **crop** nutrient requirements, fertilizer source, and litter cleanout schedule. Results indicate that litter as a fertilizer is economically favored over commercial fertilizer. **Land** area required for current litter application does not exceed suitable **land** application areas after excluding sensitive areas such as streams, roads and sink holes. However, litter from further **growth** in broiler production will soon reach the maximum capacity of suitable land areas in the...

In developing countries, land evaluation as a basis for land-use planning is often undertaken for fairly large areas and limited amounts of easily accessible climate and soil data are processed to estimate land productivity for selected crops. Land evaluation involves the process of deriving suitability maps to meet users' requests for special purpose information. The strong moves towards quantifying the land evaluation process in recent years have concurred with the development of Geographic Information Systems (GIS). This quantification consists of linking the climatic and soil information databases to crop models simulating production potentials. A combined application of a crop growth model and GIS, was used to predict the maize production potentials in the North-West...

Selecting the appropriate **crop** -production strategies is critical for the success of a production system. Strategies are normally selected based upon observations over long periods of time. Using **crop - growth models** that simulate **plant growth** and **development** and account for fundamental physiological processes to develop strategies is a new technique. Examples are presented that illustrate the utility of **crop - growth models** in **selecting** cultural practices, forecasting yields, scheduling irrigation, making drought assessments, mapping land productivity, developing agricultural weather advisory services and planning breeding programs. The effect of **model** accuracy on its utility is considered, along with requirements for computer hardware, execution speed and...

Model Selection Tests

The input use equations are estimated with the Tobit model (Maddala 1983, chap. 6). The crop-level water and land use data create censored dependent variables because every farm in the sample does not grow every crop. For example, 41 of 79 farms produce cotton. The Tobit model, unlike OLS, produces unbiased coefficient estimates with a censored dependent variable. Censored dependent variables are...

... programme in the mid-1940s (Carswell 1996). Purseglove conducted 14 transects totaling more than 52 km in the southern part of Kigezi (in the area within a 20 km radius of Kabale town) to measure the land under cultivation, swamps or woodlots. Along these transects, he calculated the slope of each piece of land, recorded land use (whether under cultivation, crop combinations, swamps or woodlots) and estimated the length of time which land had been left to fallow (by looking at the types of weeds growing). He randomly selected 34 households and collected information on household size, livestock, involvement in income-generating activities, crops stored, total area and number of plots.

A repeat survey was conducted in January 1996...

... in 14 topic areas.

The Web site can be viewed at www.deltaandpine.com.

* Combining **crop** -specific information and the power of the Internet, ProfitableFarming.com has introduced CropPlan 2000, a **crop** production and financial planning service for farmers, **farm** suppliers and other agribusiness firms and it's available at no charge.

The ProfitableFarming.com Web site provides **decision support** services for farmers, an important step before making purchases at the local **farm** store or on the Internet.

CropPlan 2000 uses the yield potential of a farmer's **land** and determines which **crops** would be most profitable--taking into account commodity prices, production expenses and other individual financial factors. **Farm** revenues, expenses and profits are then computed and detailed for each **crop** and then summarized for the **farm** as a whole--based on the **grower**'s preferences for products and services and his **selection** from thousands of seed, chemical, fertilizer and other **farm** inputs.

CropPlan 2000 is a free service for farmers, **farm** suppliers, product marketers, distributors, dealers, **farm** bankers, **crop** insurance agents, **crop** marketing agents and other agricultural businesses. All qualified agricultural businesses can list their products and...

Search Report from Ginger R. DeMille

Language: Thai Summary Language: English, Thai

Major objective of this study is to find an optimal plan for farm households' dry season crop production under the concerned constraints of land, labor, capital and water supply from irrigation, and the prevailing market conditions. A total of 75 sample from households were randomly selected from the study area. Linear programming model was employed as major analytical tool to achieve the study objective. The optimal results suggest that small farm households should grow green soybean and peanut in the dry season while medium farm households should cultivate green...

Evaluating drainage design parameters for the fourth drainage project, Pakistan by using SWAP model: Part II - modeling results

Sarwar A.; Feddes R.A.

Irrigation and Drainage Systems, 14/4 (281-299), 2000

COUNTRY OF PUBLICATION: Netherlands

ISSN: 0168-6291

DOCUMENT TYPE: Journal; Article

LANGUAGES: English SUMMARY LANGUAGES: English

NO. OF REFERENCES: 25

This paper presents the results of model simulations to evaluate drainage design parameters for the Fourth Drainage Project (FDP), Punjab, Pakistan. The SWAP model was applied to compute the effects of land drainage (12 combinations of drain depth and spacing) on soil moisture conditions in the root zone and their effect on crop yield and soil salinization. For the conditions considered, the selection of drain depth is found to be more critical than that of drain spacing. Deeper drains perform technically better in relation to crop growth and soil salinization. The optimum drain depth for the multiple cropping system of the FDP...

... the U.S. Department of Agriculture, Economic Research Service are currently using an economic programming **model** (USARM--U.S. Agricultural Resource **Model**) to simulate potential uses of CRP **land** after the program expires. USARM estimates the effects of commodity prices, **farm** program participation, **crop** acreage planted by region, and other **selected** factors on the U.S. agricultural economy(1). In tests of USARM, yields of **crops** **grown** after CRP participation are estimated to be the

Search Report from Ginger R. DeMille

same as the yields prior to CRP participation. These yield estimates are based on the assumption that placing the **land** in CRP stops yield declines that may occur from continued erosion or other processes during intensive row cropping. However, this assumption has never been tested. Since forage **crops** are often considered to be "soil-building crops" (Troeh et al.), it is not unreasonable to assume yields may actually increase when **grown** in fields previously in CRP. Assuming increased yields after CRP instead of static yields in...

**Do effects of soil compaction persist after ploughing? Results from 21
 long-term field experiments in Sweden**

117-Aug-0402:34 PM

Search Report from Ginger R. DeMille

AUTHOR: Arvidsson Johan (Reprint); Hakansson Inge
AUTHOR ADDRESS: Dep. Soil Science, Swedish Univ. Agricultural Sciences,
P.O. Box 7014, 750 07 Uppsala, Sweden**Sweden
JOURNAL: Soil and Tillage Research 39 (3-4): p175-197 1996 1996
ISSN: 0167-1987
DOCUMENT TYPE: Article
RECORD TYPE: Abstract
LANGUAGE: English

...ABSTRACT: were investigated in 21 long-term field experiments in Sweden with a total of 259 location-years. Crop yield, soil physical properties and plant establishment were determined. All experiments had two common treatments: control (no extra traffic) and compacted (350 Mg km ha-1 of experimental traffic in the autumn prior to ploughing), using a tractor and...

...yield loss was linearly correlated with the amount of traffic up to 300-400 Mg km ha-1. With greater ground contact pressure or a greater soil water content at time...

Spokesmen for Department of Agr's '78 weather outlook conf forecast warmer

than usual winter weather for Western and Northwestern states, noting that odds are 50 to 1 against having as cold a winter as '76 anywhere in US. Predict that early winter months in Northeast and Central Mississippi Valley states will be colder than normal. Richard E Felch reports subsoil moisture conditions in wheat and corn belt states range from good to excellent, few areas excessive. Expects '78 winter wheat yields per acre to duplicate '76 high yield if weather is not too deviant. Excessive subsoil moisture in Iowa and Illinois will require late spring planting of corn and soybeans and less rainfall in summer to duplicate 2 successive yrs of record yield. Farmers in old Dust Bowl areas have planted '78 winter wheat in drier soil and face spring threat of wind erosion if dry pattern develops. Conf director Donald L Gilman's comments on forecasting, farmers' eligibility for subsidies, Carter Administration's impending decision on '78 planting restrictions on corn and feed grains because of huge surplus, noted (S).)

Argentine Econ Min Jose Martinez de Hoz says Govt's econ recovery program will stress return to private enterprise principles. Measures include removal of price controls, liberalization of exch rates and clear policy of encouragement for foreign investment. Says foreign oil cos will be invited to explore and develop oilfields under contract to state oil co. Promises quick solution to disputes created by nationalization of foreign properties under Peronist Govt. Says other measures include nationalization of bank deposits of foreign banks operating in Argentina, takeover of Standard Elec and Siemens factories by telecommunication co, liberalization of exch mkt, with devaluation of about 30% in effective rate for imports and exports, except for petroleum and newsprint imports. Proposal grants farmers bonus of Govt's decision to stimulate exportable production. Martinez de Hoz says main problem in reducing inflation is Fed deficit. Says tax revenues, which represented 80% of govt spending, now represents only 20%. Announces new set of taxes on windfall profits, transfer of real estate and stocks, and annual tax of 1.5% on all individual and corp property exceeding about \$20,000 to reverse policy of Govt spending. Notes public employment has risen from 1.4-million workers to 1.74-million (M).)

EEC ends potentially destructive conflict touched off by W Ger veto of price increases for mkt's farmers. Compromise proposal is offered by GB. W Ger Cabinet, which originally rejected decision to increase farm prices by 5%, agrees to allow subsidies under community procedures. Formula has been found to satisfy W Ger demand that moderation be applied in fixing prices for '75 and EEC exec comm is charged with preparing inventory of over-all farm policy by Mar 1. French Foreign Min Jean Sauvagnargues announces that price increases will take effect. Dispute between french and W Ger over price issue and W Ger demand that EEC rev over-all performance of agr policy discussed. Illus of Pierre Lardinois (M).)

PAGE 6063. 248 PAGES

This thesis explores the use of Decision Support Systems in negotiation. It focuses on the two-party competitive negotiation (noncooperative), with multiple issues.

The research is divided into three phases. The first phase develops underlying theory and methods for two new Negotiation Support Systems (NSS). In the second phase, we conducted three experiments to test one of the new systems. The third phase consisted of an application of the system to a Finnish agricultural policy problem.

Edgeworth (1881) showed that there exists a contract curve that connects the points of tangency between the parties' indifference curves. The contract curve is equivalent to the set of Pareto-optimal (nondominated) solutions. Raiffa (1982) demonstrates how the contract curve can be constructed given additive value functions of the parties. We developed a method that constructs an approximate contract curve without the prior elicitation of value functions. The new method, the Resource Allocating Multiple Objective Negotiation Approach (RAMONA), is a two phase approach in which the users first interactively identify the contract curve, then make concessions on that curve until they converge upon an agreement point.

As part of phase two, students were used as subjects in controlled laboratory experiments. The first experiment tested the user interface of the system, split the bar, comparing it against the VIG program developed by Korhonen and Wallenius (1988). The second experiment tested the RAMONA method against an unaided approach and the traditional additive value function approach. The value function approach utilized the Policy PC software package. The third experiment tested the RAMONA method against the unaided method.

The application of RAMONA to the agricultural income policy negotiations in Finland was geared toward a simulation of the 1995 round of negotiations. Professional negotiators representing the Finnish government and the Central Union of Agricultural Producers participated. The parties negotiated over the general price levels of agricultural products, **subsidies**, and social benefits to the **farmers**.

This research suggests that Negotiation Support Systems have potential in aiding negotiators to reach high-quality agreements in many practical real-world settings. We conclude that due to the richness, complexity, and importance of the problem, the work in negotiation support has only begun.

TEXT:

A searchable Internet **database** of government **farm subsidy** payment
records is available to **farmers** through the Environmental Working Group
(EWG).

Its purpose: to show to whom **farm subsidy** funds have gone. EWG
maintains that two-thirds of the nation's **farmers** were bypassed entirely
in regards to **subsidy** payments.

The **database** is free of charge. It includes 70 million records of
farm subsidy checks sent from 1996 to 2000. View it at: www.ewg.org.
